

# SynchroNet Online Backup Services

Secure, Simplified Solution to Disaster Recovery

In today's business world, it has become increasingly important for companies to backup business data. Now that most all business records (sales contracts, accounting records, marketing materials, contacts, and e-mails) are stored in digital format, the possibilities of losing information due to an insufficient disaster recovery plan can be detrimental to the future of your organization.

For over 20 years, SynchroNet has been helping small and medium-sized businesses (fewer than 250 employees) use technology to optimize the productivity and profitability of their businesses while alleviating the risk of service disruption. SynchroNet has resolved technology issues for countless SMB clients in the local Houston area as well as supported users overseas. SynchroNet can ensure customers that they are receiving the high-level skill set required to successfully design, deploy, and maintain these dedicated online backup solutions.

- **Secure and Reliable** - The reliability of SynchroNet's collocation facility gives your company the peace of mind to know that your information is secure.
- **Easy to manage** - SynchroNet Online Backup Services do not require user intervention. Manual steps such as changing tapes, labeling disks, taking information off-site, etc. can be eliminated.
- **Features best fit your business need** – Whatever your storage needs may be, SynchroNet has the ability to tailor our services to match your most important business concerns.
- **Limited cost, unlimited protection** – 1 MB of data is worth approximately \$10,000. Rebuilding lost data could cost your company thousands of dollars and weeks to rebuild. With costs and risk that high, you cannot afford to leave your hard work unprotected.
- **Proven technology** – With over 500,000 deployments worldwide, the online backup technology offers secure, encrypted protection of your critical data.

It makes good business sense for your organization to ensure that the most valuable information can be retrieved at any moment's time. Whether it's a crashed hard drive, software corruption, computer virus, natural disaster, or human error – SynchroNet Online Backup Services should be your ultimate resource for information retrieval.
